We are Redirecting it to Home Page where we display The in Main Container as a Trending Movie Trailer Plays at background with the Movie Name and Description fetched from TMDB.

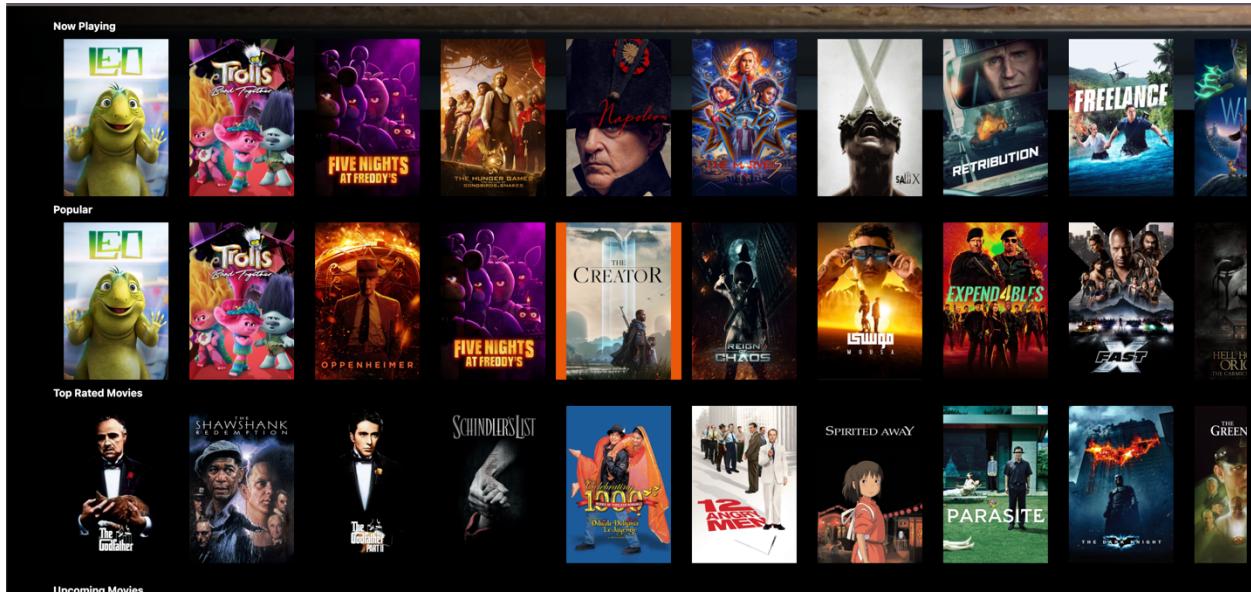

On Incorrect Password and sign in we will display the error message from firebase.

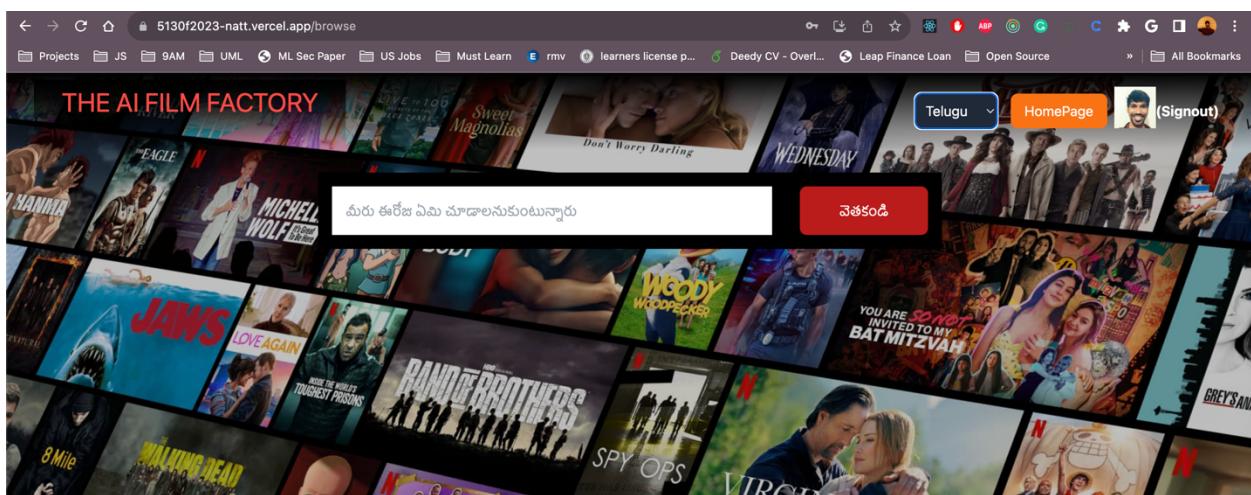

A screenshot of a web browser window. The address bar shows the URL "5130f2023-natt.vercel.app/browse". The main content is a movie page for "Leo". The title "THE AI FILM FACTORY" is at the top left, and a "GPT Search" button with a profile picture is on the right. The main image is a 3D rendering of two lizards, one green and one brown, in a jungle setting. The green lizard is in the foreground, looking towards the camera. To its left, the brown lizard's head is visible. Below the image, the name "Leo" is displayed in large white letters. A descriptive text block follows: "Jaded 74-year-old lizard Leo has been stuck in the same Florida classroom for decades with his terrarium-mate turtle. When he learns he only has one year left to live, he plans to escape to experience life on the outside but instead gets caught up in the problems of his anxious students — including an impossibly mean substitute teacher." Two buttons are at the bottom left: a white "► Play" button and a grey "More info" button. At the very bottom, there is a "Now Playing" section with several movie thumbnails.

Below the Main Container we display the below types of movies based on API's

Now Playing
Popular
TopRated Movies
Upcoming Movies.

On Click of GPT Search => We are displaying Search Bar. Where User Can Search the query

On Change of dropdown based on Languages user select we change the language according to that.
